The company

At a glance

Who we are

Our journey

How we work

Our policies

AT A GLANCE

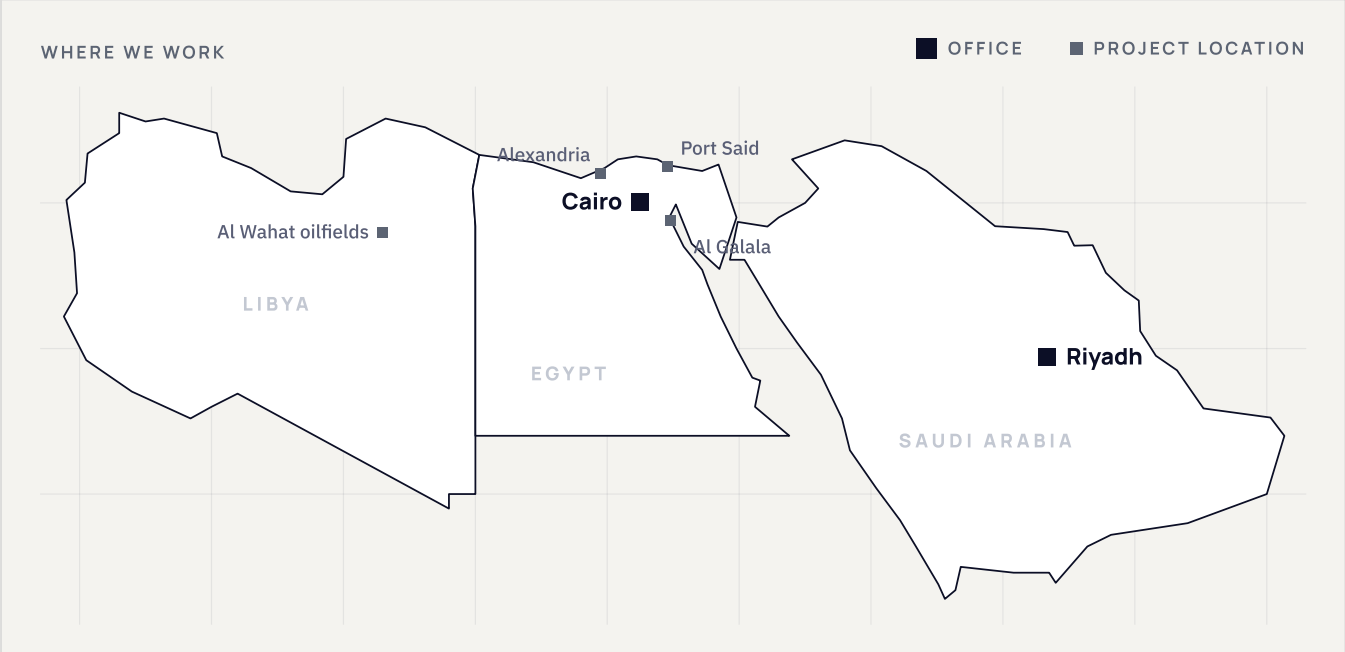

One contractor for the full build, from earthworks to a commissioned facility.

Current is an EPC contractor working across Egypt, Saudi Arabia and Libya. Our founders started building in 1993.

We do the civil and earthworks, the concrete and structural steel, and the electromechanical work with our own crews and plant. One team is accountable from the first excavation to the handover.

Our clients are energy and industrial operators, government bodies and private developers. Most of them come back.

30+	25+	82%	96%
YEARS, SINCE 1993	COMPLETED PROJECTS	REPEAT CLIENTS	ON-TIME HANDOVER

CLIENTS INCLUDE

Halliburton / Schlumberger / Eni / Petrofac / Técnicas Reunidas / Sonatrach / Vodafone / Elsewedy Electric / Talaat Moustafa Group

WHO WE ARE

The execution capacity of a large contractor. The agility of a focused team.

We plan the job properly, buy the right materials at the right price and build it safely, so clients get their handover on time and work that passes inspection the first time.

We handle engineering, procurement and construction, from the first concept through to commissioning. That means detailed design, sourcing materials wherever they come from and running the work on site.

We have built process buildings, factories, power and utilities, and large institutional projects. We know how the markets in Egypt, Saudi Arabia and Libya run, and we build to international standards inside them.

WHY CURRENT

Five reasons clients hire us again

01	**We move fast, with tight planning and clear handling of where trades meet.**
02	**One EPC team runs the civil, concrete and electromechanical work under a single lead.**
03	**We have delivered for blue-chip clients and ministries, and we mobilise across Egypt, Saudi Arabia and Libya.**
04	**Safety is run properly, and we check quality at every stage.**
05	**We buy well, local and imported, and we know customs and shipping for the equipment that matters.**

OUR JOURNEY

Three decades of building.

1993	Current starts. The co-founders begin taking on large construction jobs in Egypt.
2005	We move into Libya and start working in its growing oil and gas sector.
2014	We move into Algeria's oil and gas sector, doing civil works, construction and project management.
2015	The Egyptian branch grows fast and takes on a run of large projects.
2021	Current Egypt is formally set up, putting the co-founders' years of experience under one name.
2024	We enter the Gulf and set up Current KSA in Saudi Arabia.
2025	We set up Continental Construction & Supply in Egypt and enter the Libyan market, with our sights on more work across the region.

VISION

To be one of the top-ranked contractors in every market we work in, with the resources of a big company and the speed of a small one.

MISSION

Give clients real value through good work, and stay disciplined on safety, time and budget.

HOW WE WORK

Four things we get right on every job.

01	**Precise planning**	Detailed schedules, with the risks identified and dealt with before they reach site.
02	**Intelligent procurement**	Strategic sourcing and a supply chain we can rely on.
03	**Safe construction**	Strict safety on site and quality checked first, at every stage.
04	**On-time delivery**	Predictable costs and work that passes inspection the first time.

OUR CULTURE

How we work, every day

01	**We work as one team**	People from different trades and disciplines pull together on the same job. That is how the hard problems get solved.
02	**We keep our word**	We are straight with clients, partners and our own people. What we say is what we do, and we own the result.
03	**Safety comes first**	We keep our team and everyone on site safe. That means real safety rules and spotting risks before they turn into accidents.
04	**We keep getting better**	Our people keep learning and taking on more. The industry keeps moving, and so do we.

OUR POLICIES

Quality, health, safety and environment.

Quality policy

We put our customers at the centre of what we do, and we keep improving our services as the construction market asks for more.

OUR OBJECTIVES

Use our resources well, so we meet deadlines and stay competitive.

Improve communication at every level of the company.

MANAGEMENT COMMITS TO

Provide the organisational, material and financial resources the system needs.

Listen to every suggestion for improving the management system.

Respect the regulations that apply to our work.

Review the quality management system regularly through management reviews.

Management system developed in line with ISO 9001:2015.

Health, safety and environment policy

Protecting people's health and safety and the environment we work in is one of the main lines of our strategy. It is everyone's business.

OUR COMMITMENTS

Comply with the legal and regulatory requirements that apply to us.

Prevent pollution, personal injury and damage to health.

Keep HSE management at the heart of the business and keep improving it.

OUR AIMS

Use less, to preserve natural resources.

Reduce the environmental impact of our sites and improve waste management every day.

Reduce work accidents and risks to an acceptable level.

Train our people in safety and the environment.

Management system developed in line with ISO 45001:2018 and ISO 14001:2015.

Both policies were issued by company management in January 2022 and apply to every Current site and office.

SECTION 02

Services and clients

Civil Works & Earthworks

Concrete & Steel Structures

Electromechanical (MEP)

General Contracting

Process & Industrial Buildings

Commercial & Administrative

Design-Build

Fit-Out

Housing & Accommodation

Renovation & Turnkey

OUR SERVICES

Ten services, one accountable team.

We self-perform the work across the full build, so there is one contract, one programme and one team to call.

01

Civil Works & Earthworks

Site prep, excavation and foundations, done safely and without wasting time.

02

Concrete & Steel Structures

Fair-face concrete and structural steel built to keep your schedule moving.

03

Electromechanical (MEP)

HVAC, fire protection and electrical systems that fit together, with the cost kept in check.

04

General Contracting

We run the whole job: the QA, the reporting and the crews, all on us.

05

Process & Industrial Buildings

Plants and facilities built to run without stopping.

06

Commercial & Administrative

Workplaces and logistics space that work well and hold up over time.

07

Design-Build

Design and build from one source, so the schedule tightens and change orders drop.

08

Fit-Out

Commercial and residential interior finishes built to spec and handed over on time.

09

Housing & Accommodation

Housing that lasts, from single units to full workforce camps.

10

Renovation & Turnkey

Upgrades and handover-ready work with as little disruption to your operation as we can manage.

OUR CLIENTS

Energy majors, ministries and private developers.

82% of our clients have come back with more work.

Energy majors

International and national oil and gas operators and their EPC contractors.

Government

Ministries, the armed forces and public agencies.

Private sector

Manufacturers, developers and telecom operators.

Main contractors

Regional and international contractors we build for as a specialist.

GOVERNMENT · NATIONAL LANDMARK · 1995–1999

Supreme Constitutional Court

A national landmark on the Nile. Ancient Egyptian symbolism, built in modern architecture and engineering.

The Supreme Constitutional Court sits on the Maadi Korniche in Cairo. It started as an international architectural design competition, which we won working with Arch. Ahmed Mito. From that winning concept, we produced the full tender and construction documents. That meant taking the design's ancient Egyptian symbolism and turning it into a building that could actually be built. The building holds the court's administrative body along with its court and ceremonial halls.

From 1995 to 1999, working with Sabbour Consultants, we ran the full architectural construction supervision. Arab Contractors did the works. We led the design development and solved the problems that came up on site, and we made sure the architecture lined up with every structural and MEP requirement so the building came out the way it was designed.

OWNER	**Egyptian Government**
SCOPE	**Design, tender & construction documents, supervision**
TIMELINE	**1995–1999**
LOCATION	**Maadi Korniche, Cairo**

CHALLENGE

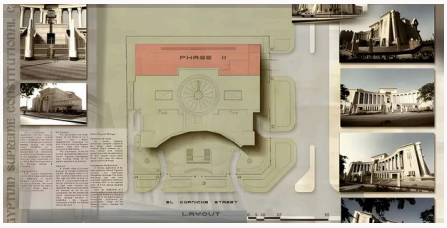

Take a competition-winning concept full of ancient Egyptian symbolism and engineer it into a real building that met every structural and MEP requirement.

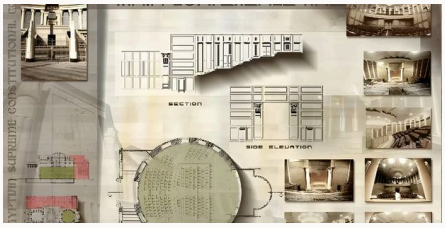

SOLUTION

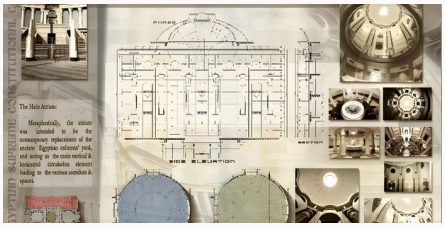

We wrote the full tender and construction documents, then ran the architectural supervision with Sabbour Consultants. Design development and on-site problem-solving alongside Arab Contractors.

RESULT

A landmark on the Nile, built over four years. It houses the court's administrative body, court and ceremonial halls.

COMMERCIAL · LANDMARK · 2000

Vodafone Square

We built this in three weeks flat. A 20 m GRC structure and four ancient-Egyptian Lotus columns, set in a 50 m public square.

We took this on as a full EPC turnkey job for a Vodafone Egypt campaign. The site was a 50 m-diameter square in 6th of October City, and we had to turn it into a branded public landmark on a very tight clock. We finalised the design in one week. Then we ran construction around the clock and took the whole square from bare ground to unveiling in three weeks. In the middle sits a 20 m GRC structure carried on structural steel frames. We engineered, fabricated and erected it inside that same programme.

Around the centrepiece, four freestanding ancient-Egyptian Lotus columns rise from a raised podium, framing multi-level flower beds clad in marble and natural stone. We finished with landscape planting and integrated lighting, so the square reads well by day and by night. It was ready on the campaign's launch date, which never moved.

OWNER	**Vodafone Egypt**
SCOPE	**EPC Turnkey**
TIMELINE	**2000**
LOCATION	**6th of October City, Giza**
STRUCTURE	**20 m GRC on structural steel frames**
SQUARE	**50 m diameter**

CHALLENGE

A campaign launch date that couldn't move, measured in weeks, with a 20 m landmark to design, engineer and build and no room in the schedule.

SOLUTION

Design done in one week, then EPC work running 24/7. Steel erection, GRC installation, stone cladding, planting and lighting all ran in parallel.

RESULT

The whole square, structure, Lotus columns, podium and landscaping, opened on time, three weeks after we broke ground.

ENERGY · OIL & GAS · 2006 – 2008

Halliburton FOX9 Base Camp

A 250,000 m² living and industrial hub in the Libyan desert. We took it turnkey on an EPC basis, built to international oil & gas standards, from the prefabricated housing to a 10,000 m² crane-equipped workshop.

We built a complete living and industrial hub for Halliburton operations, 250,000 m² out in the Libyan desert. The camp housed 200 staff in prefabricated buildings, with dining, kitchen, storage and laundry. Next to it we put up an industrial complex of more than 20,000 m².

The main piece was a 10,000 m² workshop, built from pre-engineered insulated steel. It had overhead cranes, drive-through maintenance bays and automated roll-up doors, plus a second floor for testing laboratories and offices. The infrastructure was a big part of the job. We drilled water wells, put in water and sewage treatment plants and ran an underground electrical and piping network across the site. We also built a 2,000 m perimeter of 4 m-high double-protected fencing.

CLIENT	Halliburton
SCOPE	EPC Turnkey
TIMELINE	2006 – 2008
LOCATION	Al Wahat Desert, Libya
SITE AREA	250,000 m²
WORKSHOP	10,000 m²
CAMP CAPACITY	200 staff

CHALLENGE

Build an oilfield-services facility to international oil & gas standards on a controlled site where safety came first.

SOLUTION

We self-performed the civil and supporting MEP works, with strict HSE and QA/QC under client and EPC oversight.

RESULT

The facility was built to spec and handed over ready to run.

INFRASTRUCTURE · POWER · 2009

Sidi Kerir Seawater Intake

A deep marine concrete structure on the Mediterranean shore. It's 20 × 20 m and 15 m deep, watertight and leak-tested.

We did the civil works for a deep seawater intake structure on the Mediterranean shore of the Sidi Kerir power plant near Alexandria. The main contractor was Archirodon Construction Overseas. The structure is 20 m × 20 m in plan and goes 15 m deep. It's a reinforced concrete basin, and it had to be built tight against the sea and proven watertight before we handed it over. We handled the full concrete package: the reinforced concrete raft foundation at the base of the excavation and the 60 cm-thick, 15 m-high retaining walls that form the intake chamber.

The walls carry openings and embedded provisions for the plant's intake pipelines. Each one was detailed with water-retaining joints and sealing systems to keep the structure leak-free at full depth. Once it was finished, the whole structure went through leak tests to prove the raft, the wall joints and the pipeline penetrations were all watertight. We delivered the works in 2009.

MAIN CONTRACTOR	**Archirodon Construction Overseas**
SCOPE	**Civil works, concrete structures**
TIMELINE	**2009**
LOCATION	**Sidi Kerir, Alexandria**
STRUCTURE	**20 m × 20 m × 15 m deep**

CHALLENGE

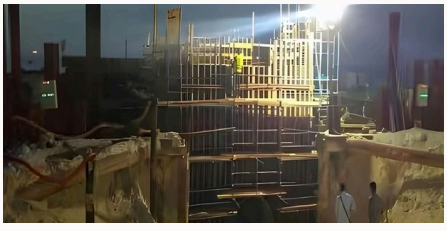

Cast a watertight 15 m-deep concrete basin right on the seashore, with pipeline penetrations passing through 60 cm walls under constant water pressure.

SOLUTION

A reinforced concrete raft and full-height retaining walls, with water-retaining detailing at every joint and pipeline crossing, built to marine-grade concrete standards.

RESULT

The finished structure passed its leak tests and was handed over watertight. It runs the power plant's seawater intake.

OIL & GAS · LIBYA · 2010

Schlumberger Workshop

A 7,500 m² workshop in the Libyan desert, built EPC. Overhead cranes, drive-through bays and double-floor testing labs.

We built a 7,500 m² maintenance workshop for Schlumberger at the 103 Oilfield, out in Libya's Al Wahat Desert, on a full EPC basis. It's a pre-engineered, fully insulated steel building on heavy concrete footings and a 250 mm reinforced concrete slab. The slab had to carry heavy oilfield equipment and constant vehicle traffic. Drive-through maintenance bays run the length of the building, with manual and electrical roll-up doors and overhead cranes to lift drilling and testing equipment right at the workstations.

We also did the full industrial fit-out. That meant workshop lighting and compressed-air networks, galvanized electrical conduits and cable trays running to calibrated MDB and distribution boards, and the firefighting, alarm and sanitary systems throughout. A double-floor design puts the testing laboratories, admin offices and storage inside the same envelope, so Schlumberger's field teams work from one self-contained base in one of the more remote spots in North Africa.

OWNER	**Schlumberger Libya**
SCOPE	**EPC**
TIMELINE	**2010**
LOCATION	**Al Wahat Desert, 103 Oilfield, Libya**
AREA	**7,500 m²**

CHALLENGE

Put up a fully serviced industrial workshop in a remote desert oilfield, where every material, crane and crew had to come in over long desert supply lines.

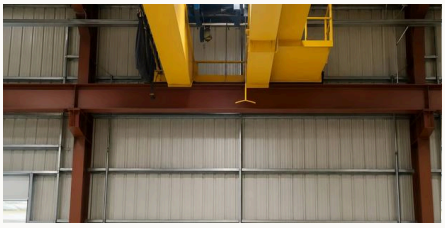

SOLUTION

A pre-engineered insulated steel building put up fast on heavy footings and a 250 mm slab, with all the MEP networks (power, air, lighting and fire) installed as one coordinated EPC package.

RESULT

A 7,500 m² double-floor facility with drive-through crane bays, testing labs, offices and storage, handed over ready to run around the clock.

GOVERNMENT · NEW ADMINISTRATIVE CAPITAL · 2015–2016

Al Fattah El Aleem Mosque Celebration Halls

Celebration halls for one of the first buildings in the New Administrative Capital, built on a tight programme at a remote site.

The Al Fattah El Aleem Mosque was one of the first buildings to go up in the New Administrative Capital. We built its celebration halls: a concrete structure with underground parking and service areas, and large halls with high ceilings and wide spans. The programme was tight and the site was remote at the time.

Outside, the facades combine GRC elements with marble, CNC-cut steel work and cement board, with decorative domes on steel structures, heavy wooden doors and double-glazed aluminium windows and cladding. Inside there are decorative wood and GRC wall panels and marble and wood floors. GRC false ceilings hide the MEP and HVAC systems.

OWNER	New Administrative Capital Company
SCOPE	Project management, earthworks, concrete structure, exterior and interior finishes
TIMELINE	2015–2016
LOCATION	New Administrative Capital, Regional Ring Road, Cairo

INDUSTRIAL · MANUFACTURING · 2016

MEDCO Plast Factory

A plastics plant built around steel columns that stand 16 metres high.

We built this factory for Medco in 6th of October City, Cairo, on a full EPC basis in 2016. We started with heavy concrete foundations and put a steel superstructure on top. The steel columns run a full 16 metres, which gives the plant its shape and its height.

Tall columns and long spans mean the interior is open, with few columns getting in the way of the plastics lines. Because we ran the whole job under one EPC scope, we handled the engineering, the buying and the construction ourselves. Fabrication and erection stayed in step, and quality control sat with one team from the first drawing to handover.

OWNER	Medco
SCOPE	EPC
TIMELINE	2016
LOCATION	6th of October City, Cairo
STRUCTURE	Concrete foundations & steel structure
COLUMNS	16 m high

RESIDENTIAL · RESORT · 2016–2017

Touristic Villas Compound

Thirty standalone villas at the Galala resort, built from the ground up. We took it from earthworks and soil improvement all the way to turnkey handover.

We built thirty standalone villas at Al Galala on the Red Sea for the Egyptian Army, as a full EPC turnkey package over 2016–2017. The job started at ground level. We did the earthworks and improved the soil across the remote resort plateau, then poured the concrete structures for every unit.

After the structures were up, we carried the villas through external and internal finishings, insulations and the full MEP works. We finished with landscaping across the compound and handed everything over turnkey. The hard part was the location. It sits far from the usual supply lines, so getting thirty finished units to the same standard came down to tight logistics and doing every villa the same way, from the first cut to the last planting.

OWNER	Egyptian Army
SCOPE	EPC Turnkey
TIMELINE	2016–2017
LOCATION	Al Galala, Red Sea
UNITS	30 standalone villas

CHALLENGE

Build thirty villas to the same standard in a remote Red Sea resort, starting on unimproved ground with few local suppliers to draw on.

SOLUTION

One EPC turnkey delivery. Soil improvement, concrete structures, finishings, insulations and MEP, all run the same way across every unit.

RESULT

All 30 villas finished, landscaped and handed over turnkey inside the 2016–2017 programme.

INDUSTRIAL · MANUFACTURING · 2018–2019

EMC Adidas Factory

A 250-ton steel frame with a 4,500 m² clear span across two floors, built for the fabric industry.

We built this 8,500 m² factory for Elite Merchandising Company (EMC) in the Free Zone at Borg El Arab, Alexandria, on an EPC and turnkey basis. The job was designed around what fabric manufacturing needs. The heart of it is a 250-ton steel structure that opens up a 4,500 m² clear span across two floors. No columns in the way, so the machinery sits where it needs to and the production line runs without breaks.

We ran every phase between 2018 and 2019: earthwork first, then the steel erection, then finishes, MEP and landscaping. It went in on time and met the Quality and HSE standards the client set.

OWNER	**Elite Merchandising Company (EMC)**
SCOPE	**EPC & Turnkey**
TIMELINE	**2018–2019**
LOCATION	**Free Zone, Borg El Arab, Alexandria**
AREA	**8,500 m²**
STEEL	**250-ton structure, 4,500 m² free span**

CHALLENGE

Open up a column-free 4,500 m² span across two floors so the fabric machinery and the production line have room to work.

SOLUTION

Engineer and erect a 250-ton steel structure, and run the whole job under one EPC contract: earthwork, steel, finishes, MEP and landscaping.

RESULT

An 8,500 m² turnkey factory, handed over on time to the Quality and HSE standards the client set, ready to run.

INDUSTRIAL · MANUFACTURING · 2018–2019

EMC Calvin Klein Factory

A manufacturing plant for the fabric industry. A 250-ton steel structure covering 4,500 m² across two floors.

We built this plant for Elite Merchandising Company (EMC) in the Industrial Area of 6th of October City. It was a full EPC turnkey job, so we handled everything. The building is a 250-ton steel structure holding 4,500 m² over two floors. We designed it around fabric-industry work, which meant setting the structural grids, floor loadings and services routing to suit the machinery the production lines run.

The work ran from 2018 to 2019. We started with the earthwork, put up the steel, did the finishes, installed the full MEP systems and finished the landscaping. Keeping design, procurement and construction under one team meant one point of accountability the whole way through. We handed it over on time, and it came in above the project's Quality and HSE standards.

OWNER	Elite Merchandising Company (EMC)
SCOPE	EPC Turnkey
TIMELINE	2018–2019
LOCATION	Industrial Area, 6th of October City
STEEL STRUCTURE	250 tons
AREA	4,500 m² over two floors

CHALLENGE

Build a two-floor, 4,500 m² production hall that could take the loads, vibration and services the fabric-industry machinery needs.

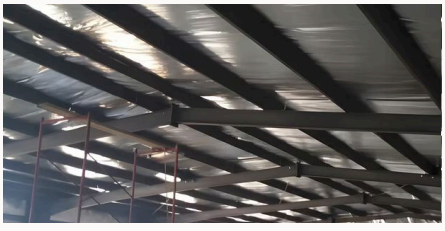

SOLUTION

One team ran the whole EPC turnkey job: earthwork, a 250-ton steel structure, finishes, MEP systems and landscaping.

RESULT

Handed over on schedule in 2019, above the Quality and HSE standards, and ready for production fit-out on day one.

GOVERNMENT · SPORTS · 2018–2019

Multipurpose Sports Halls

A conference hall with reception foyers and several indoor sports halls, all in concrete under one pre-engineered steel roof.

We built this for the Egyptian Army at the Naval Base in Port Said, as an EPC turnkey contract. It's a conference hall with reception foyers and support services, plus several indoor sports halls, all under one roofline. We did the whole thing from the ground up. Earthwork and soil improvement came first, then the cast-in-place concrete structures, then a pre-engineered steel roof spanning the halls.

After the structure we handled the external and internal finishings, the insulation and the full MEP works, then finished with landscaping and turnkey handover. Start to finish, from soil improvement to a commissioned, ready-to-use facility, ran from 2018 to 2019.

OWNER	Egyptian Army
SCOPE	EPC Turnkey
TIMELINE	2018–2019
LOCATION	Naval Base, Port Said

CHALLENGE

Build large-span conference and sports halls on improved ground inside a secure naval base, on a tight 2018–2019 schedule.

SOLUTION

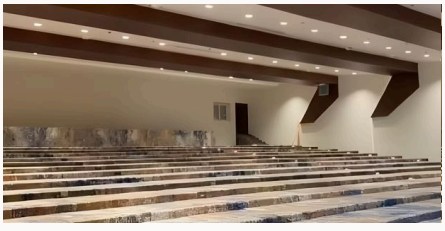

One EPC turnkey delivery. We sequenced the soil improvement and concrete structures tightly with the steel roof, then finishings, insulation and MEP.

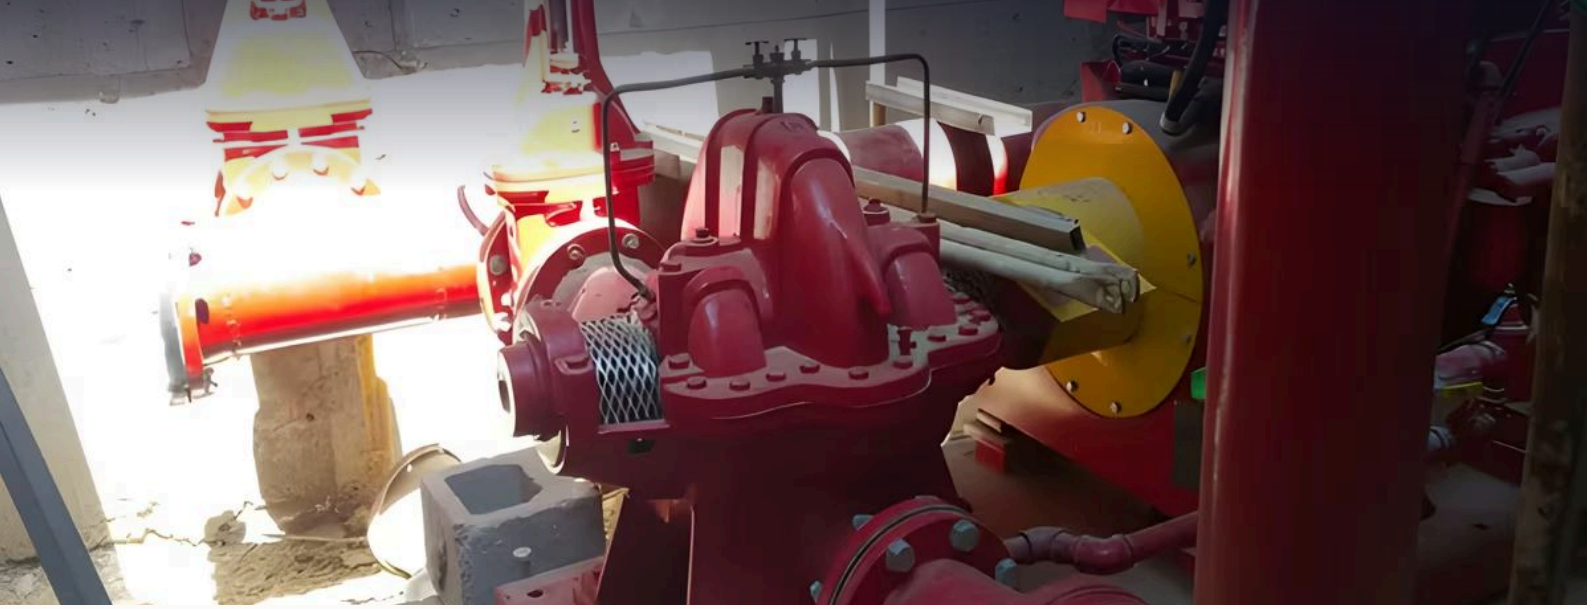

RESULT

Conference hall, reception foyers and indoor sports halls, landscaped, commissioned and handed over turnkey.

INDUSTRIAL · WAREHOUSING · 2018

Nasita Factory

A warehouse complex built from the ground up. Several facilities of 3,500 m² each, with Current handling the design and the construction.

We built a warehouse complex for Nasita in the Industrial Area of 6th of October City in 2018. It was a full EPC job, so we did the design, the engineering, the procurement and the construction. We took each building from the first architectural and structural drawings through the engineering, the materials and the site work, and delivered several warehouses of 3,500 m² each under one programme.

Each warehouse was designed for the way it would actually be used. The floor layouts make the most of the storage space. The structures are sized to carry heavy racking and handling loads. The loading access, circulation and services are set up for different storage and logistics work. Because we ran the whole thing, the owner had one team to answer for it from the first drawing to handover.

OWNER	**Nasita**
SCOPE	**Design, engineering, procurement & construction (EPC)**
TIMELINE	**2018**
LOCATION	**Industrial Area, 6th of October City**
AREA	**3,500 m² per facility**

CHALLENGE

Build several 3,500 m² warehouses as one complex, each set up for a different kind of storage and logistics work.

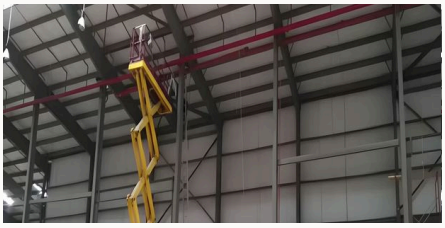

SOLUTION

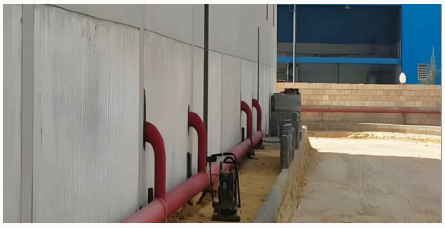

One EPC programme run by one team: architectural and structural design, engineering, procurement and construction.

RESULT

A warehouse complex built to current industrial standards, with efficient layouts and structures ready to work from day one.

RESIDENTIAL · 2018–2019

Residential Apartment Buildings, R1

Eight multi-storey residential buildings in the New Administrative Capital, built and handed over ready to live in.

In the R1 District of the New Administrative Capital, we built eight multi-storey residential buildings for the Egyptian Army on a full EPC turnkey contract. The work ran from 2018 to 2019. Everything was on us from the first day: earthwork and soil improvement, the reinforced concrete structures, and the whole external and internal finishing.

Past the structure and architecture, we also did the insulations, all the MEP works and the landscaping across the plots. We closed by handing over all eight buildings ready for people to move in. Running eight identical buildings at the same time meant sequencing the trades carefully, floor by floor. We reused the same methods on every building, so the quality held from the first pour to the last fixture.

OWNER	**Egyptian Army**
SCOPE	**EPC Turnkey**
TIMELINE	**2018–2019**
LOCATION	**New Administrative Capital, R1 District, Cairo**
UNITS	**8 multi-storey buildings**

CHALLENGE

Build eight multi-storey buildings at once under one turnkey contract, from raw ground to move-in condition, inside a two-year window.

SOLUTION

We kept the whole chain in-house: soil improvement, concrete structures, finishings, insulations, MEP and landscaping. The same trade sequence ran across all eight buildings.

RESULT

All eight buildings were finished and handed over turnkey in 2019, complete with services and landscaping, for the Egyptian Army.

INFRASTRUCTURE · TRANSPORT · 2020–2021

Central Bus Station

24,000 m² built fast. 11 m ceilings, 12 m spans, and 1.8 m circular fair-faced columns.

We built this 24,000 m² transport hub for the Egyptian Army in the New Administrative Capital, on a fast-track programme through 2020–2021. The structure is what makes it. Rows of circular fair-faced reinforced concrete columns, each 1.8 m across, rise through 11 m ceilings and carry post-tensioned solid slabs over clear 12 m spans. Every column face was cast as the finished surface, with no cladding and no patching afterwards. That meant the formwork on the whole civil and concrete package had to hold to the millimetre.

Below ground, the structure sits on large independent footings tied together by grade beams, topped with fair-faced slabs on grade that also serve as the station's finished floor. Fitting a structure this size into a fast-track window meant overlapping the foundation pours, the post-tensioning cycles and the formwork rotations so they ran into each other, and we did it without letting the exposed concrete quality slip.

OWNER	**Egyptian Army**
SCOPE	**Civil works, concrete structures**
TIMELINE	**2020–2021**
LOCATION	**New Administrative Capital, Cairo**
AREA	**24,000 m²**
CEILINGS	**11 m**
SPANS	**12 m**

CHALLENGE

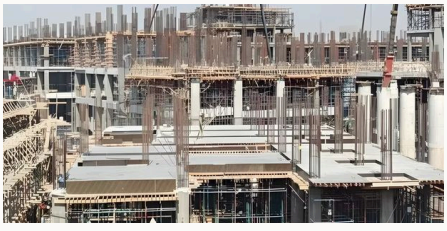

Build 24,000 m² of exposed structural concrete, with 1.8 m circular fair-faced columns, 12 m spans and 11 m ceilings, on a fast-track programme where every cast surface is the finished product.

SOLUTION

Post-tensioned solid slabs on precise fair-faced columns, sitting on large independent footings linked by grade beams. We ran the formwork and tensioning cycles in continuous overlap to hold the schedule.

RESULT

A transport hub for the New Administrative Capital, finished inside the tight 2020–2021 window with architectural-grade concrete throughout.

INDUSTRIAL · LOGISTICS · 2023

EMC: Reebok Storage

A distribution facility with climate-controlled storage, loading docks and the warehouse-management systems to run it.

We built a distribution facility for Elite Merchandising Company (EMC) in the Industrial Area of 6th of October City. It was a full EPC turnkey contract, finished in 2023. The building runs on pre-engineered steel, with climate-controlled storage areas, loading docks built for the job, and material-handling systems threaded through it. That's what an apparel distribution operation needs to move stock.

We ran it from design through construction, so one team was responsible for the whole thing. We put in the warehouse-management infrastructure, the security systems, and a logistics layout planned around how goods come in, sit in storage and go back out. The building gives EMC the throughput and environmental control a global brand asks for.

OWNER	Elite Merchandising Company (EMC)
SCOPE	EPC Turnkey
TIMELINE	2023
LOCATION	Industrial Area, 6th of October City

CHALLENGE

Build a climate-controlled distribution hub with loading docks and material-handling systems to a global brand's standards, all on one turnkey contract.

SOLUTION

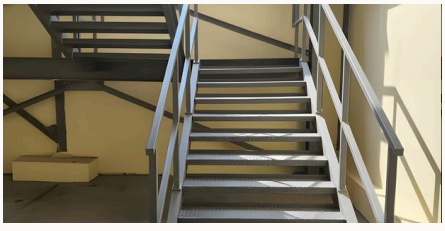

Full EPC delivery: pre-engineered steel, warehouse-management infrastructure, security systems and a logistics layout built for flow, all from design through construction.

RESULT

A fully equipped storage and distribution facility, handed over in 2023 and running EMC's day-to-day distribution.

ENERGY · SAUDI ARABIA · 2024

HVDC Converter Stations

Concrete structures for power-transmission infrastructure in Riyadh, built to a main contractor's tight standards.

We worked under the main contractor, Alfanar, on an EPC basis. Our part was the civil works and the concrete structures for HVDC converter stations in Riyadh, which feed into Saudi Arabia's power-transmission network. On a converter station there's no room for tolerances to drift. The heavy equipment foundations, the valve-hall structures and the specialised concrete all had to hit the dimensional and quality criteria set by the main contractor and the end operator.

We delivered through 2024. Our Quality and HSE systems had to line up with Alfanar's standards from day one. We put skilled crews and resources across several work fronts at once, and we kept in close contact with the main contractor's engineering and installation teams so the concrete works stayed on schedule. Safety was never traded off to get there.

MAIN CONTRACTOR	**Alfanar**
CONTRACT	**EPC**
SCOPE	**Civil works, concrete structures**
TIMELINE	**2024**
LOCATION	**Riyadh, Saudi Arabia**

CHALLENGE

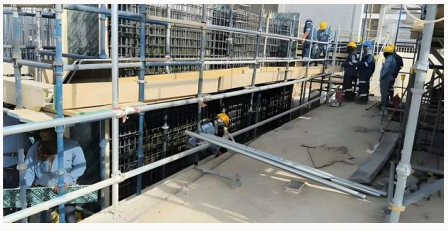

Hitting the main contractor's Quality and HSE standards on complex converter-station concrete work, while keeping several work fronts resourced at the same time.

SOLUTION

We deployed skilled crews and resources where they were needed, matched our QA/QC and HSE systems to Alfanar's requirements and coordinated tightly across every interface.

RESULT

The concrete structures were finished on schedule and to standard, with no compromise on safety and full acceptance by the main contractor.

INDUSTRIAL · EXPANSION · 2024

Milita Egypt, Factory 3

We added a steel expansion to a working concrete factory and never once stopped production.

In 2024 we came in as main contractor to repair and expand Milita Egypt's factory in the Duty Free Zone, Alexandria. The plant had one rule we couldn't break: production stays running. So we tied new pre-engineered steel buildings into the old concrete structures. That meant special foundations, careful structural connections where steel meets concrete, and MEP that had to work across the old and new zones without touching the live plant.

We sequenced every phase around the factory's shifts, so the plant kept running from the day we mobilised to the day we handed over. We finished on schedule. The bigger facility now runs smoother and can take a lot more manufacturing output.

OWNER	**Milita Egypt**
ROLE	**Main contractor**
SCOPE	**Repair & expansion of existing factory**
TIMELINE	**2024**
LOCATION	**Duty Free Zone, Alexandria**

CHALLENGE

Expand and repair a factory that couldn't stop running, and join new steel to ageing concrete buildings while production carried on.

SOLUTION

Special foundations, engineered steel-to-concrete connections, and MEP brought in phase by phase around the plant's live shifts.

RESULT

Delivered on schedule. One integrated, larger facility that runs better and can produce more.

RESIDENTIAL · SAUDI ARABIA · 2025

Banan Residential Villas

Civil works and concrete structures in Riyadh, built to a main contractor's quality and HSE rules.

On the Banan residential villas in Riyadh, we worked as subcontractor to the main contractor, Square. We did the full civil works and concrete structures package through the 2025 programme. That covered everything from earthworks and substructure up to the cast-in-place concrete frames. Square ran a formal inspection and approval regime, so our site teams held work at each check point until it was signed off, to their quality and HSE standards.

Hitting that standard on time came down to resourcing. We put enough plant, formwork and skilled crews on site to keep the concrete cycles moving without slipping on tolerances. All the concrete structures went in on spec and inside the 2025 programme. It's the kind of job that keeps tier-one main contractors in Saudi coming back to us for structures.

MAIN CONTRACTOR	Square
ROLE	Subcontractor
SCOPE	Civil works, concrete structures
TIMELINE	2025
LOCATION	Riyadh, Saudi Arabia

CHALLENGE

Deliver civil works and concrete structures to Square's quality and HSE rules, with formal hold-point inspections at every stage.

SOLUTION

Put enough plant, formwork and skilled crews on site to keep concrete cycle times up while meeting Square's full inspection regime.

RESULT

All concrete structures across the villas package built on spec and inside the 2025 programme.

INDUSTRIAL · IN PROGRESS · 2025–2026 (IN PROGRESS)

EMC 8

Under construction now: a 300-ton steel structure across three floors and close to 8,000 m².
The top floor is a full free span, no columns.

EMC 8 is a full EPC turnkey job for Elite Merchandising Company in the Industrial Area of 6th of October City. It's a three-floor industrial building of roughly 8,000 m², carried on a 300-ton steel structure and built for fabric-industry manufacturing. We started on site in 2025 and are working toward completion in 2026. Current handles the engineering, the procurement and the construction.

The top floor is the hard part. It's a complete free span: no internal columns, nothing in the way, just open production space the owner can lay out however they want. Getting a clear span that size on the top level of a multi-storey steel building takes careful structural design and a disciplined erection sequence. That's the kind of steel and multi-storey industrial work we do.

OWNER	Elite Merchandising Company (EMC)
SCOPE	EPC Turnkey
TIMELINE	2025–2026 (in progress)
LOCATION	Industrial Area, 6th of October City
AREA	~8,000 m² over three floors
STEEL	300-ton structure

CHALLENGE

Build a three-floor, ~8,000 m² manufacturing facility with a top floor that stays completely column-free, all on a working industrial site.

SOLUTION

A 300-ton steel structure with long-span framing on the upper level, run under a single EPC turnkey contract that covers design through erection.

RESULT

A fabric-industry facility going up on schedule for 2026, with a free-span top floor that lets the owner set out production lines any way they need.

SECTION 04

Key personnel

Maj. Gen. Mohamed Abdelaziz, Chairman

Eng. Ahmed Elewa, Vice-Chairman

Eng. Mohamed Ragab, Chief Executive Officer

Dr. Ahmed Baibars, Engineering Consultant

Eng. Arafat Matar, Branch Manager, Saudi Arabia

Eng. Mohamed Shelbaya, Construction Director

Eng. Omar Elewa, Administrative Director

KEY PERSONNEL

The people who lead Current.

CHAIRMAN

Maj. Gen. Mohamed Abdelaziz

Sets the company's direction and governance across Egypt, Libya and Saudi Arabia, after a career in military command.

VICE-CHAIRMAN

Eng. Ahmed Elewa

More than 25 years in North African construction, in EPC and oil and gas civil works. Former country manager in Libya.

CHIEF EXECUTIVE OFFICER

Eng. Mohamed Ragab

CEO since 2020. More than 18 years in oil and gas, manufacturing and civil infrastructure.

ENGINEERING CONSULTANT

Dr. Ahmed Baibars

General Manager of ALNOOR Engineering Design & Consultant. 30+ years in architectural and structural design.

BRANCH MANAGER, KSA

Eng. Arafat Matar

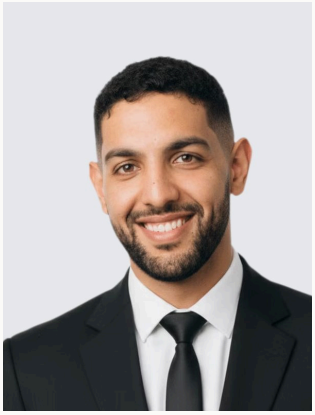

Leads Current's work in the Kingdom. B.Sc. Architectural Engineering, Cairo University, 2017.

CONSTRUCTION DIRECTOR

Eng. Mohamed Shelbaya

Runs site execution, technical office, planning and contract administration on industrial and commercial projects.

ADMINISTRATIVE DIRECTOR

Eng. Omar Elewa

Oversees administration, procurement and operations governance. Previously in supply chain and procurement at Procter & Gamble.

Full biographies follow on the next pages.

ROLE
Chairman

BACKGROUND
Military command

MARKETS
Egypt, Libya, Saudi Arabia

CHAIRMAN

Maj. Gen. Mohamed Abdelaziz

Major General Mohamed Abdelaziz is Chairman of Current. He brings a career in military command to the leadership of the company's work in Egypt, Libya and Saudi Arabia.

As Chairman he sets the company's strategic direction and is responsible for its governance and financial oversight. He leads the company's relationships with its main stakeholders and its expansion into new markets.

He also oversees the company's approach to risk management and corporate social responsibility.

RESPONSIBILITIES

- Strategic direction
- Governance
- Financial oversight
- Stakeholder relations
- Market expansion
- Risk management

EXPERIENCE
25+ years

REGIONS
Egypt, Libya, Algeria

FOCUS
EPC, oil and gas civil works

VICE-CHAIRMAN

Eng. Ahmed Elewa

Ahmed Elewa is Vice-Chairman of Current. He has more than 25 years of experience in North African construction, mainly in EPC and oil and gas civil works.

He was Country Manager in Libya for a regional contractor for ten years, with full responsibility for operations, logistics and commercial management. As Senior Project Manager in Algeria he delivered a major programme on time and within budget, and received several client commendations.

As Regional Technical Manager he ran project controls, contract administration, claims and tendering. On work for JGC/Sonatrach and Petrofac he took invoicing from a 50% deficit to a 180% surplus, and the target-based systems he introduced raised productivity by 150%.

Before that he ran his own practice. He was part of the team that won the architectural competition for Egypt's Supreme Constitutional Court, and he delivered telecom facilities for Vodafone and residential developments.

- Vodafone

CHIEF EXECUTIVE OFFICER

Eng. Mohamed Ragab

2006 – 08	**Libya** Oil and gas facilities
2009 – 15	**Algeria** Sonatrach and Medgaz pipeline plants and depots
2012	**Turkey** Manufacturing operations
2013 – 14	**Libya** Materials testing laboratories
2015 – 19	**Egypt** Multidisciplinary contracts for a major construction company
2020 –	**Current** Chief Executive Officer

Mohamed Ragab has been Chief Executive Officer of Current since 2020. He has more than 18 years of experience in oil and gas, manufacturing and civil infrastructure, and leads the company's industrial programmes in Egypt and the Gulf.

As CEO he is involved at every stage of a project: front-end planning and design coordination, procurement, contractor mobilisation, cost and schedule control, QA/QC and HSE compliance, then commissioning and handover.

He began in Libya on oil and gas facilities, then spent six years in Algeria on pipeline-related plants and depots for Sonatrach and Medgaz. He also worked on a manufacturing plant in Turkey and on materials testing laboratories in Libya. From 2015 to 2019 he ran multidisciplinary contracts in Egypt for a major construction company.

At Current he directed the construction and handover of the EMC2, EMC5, EMC7 and EMC8 factories, along with factory expansions and utilities networks. Since 2023 he has overseen infrastructure work in Riyadh, including road and bridge packages and a northern lift station, working with the government authorities involved.

DELIVERED AT CURRENT

ENGINEERING CONSULTANT

Dr. Ahmed Baibars

Dr. Ahmed M. Sabry Baibars is Current's Engineering Consultant and the General Manager of ALNOOR Engineering Design & Consultant. He has more than 30 years of experience in architectural and structural design for concrete and steel projects across Egypt.

His work covers commercial, administrative, residential and industrial buildings, with particular depth in pharmaceutical plants, warehouses, steel structures, mosques, water and oil tanks and mixed-use towers.

He leads multidisciplinary teams through the full design process: architectural and structural design, steel workshop drawings, BOQs, tender documents, feasibility studies and site supervision to international standards.

His projects include pharmaceutical plants, food and chemical factories, warehouse complexes, a school and a number of mixed-use towers across Egypt.

BRANCH MANAGER, SAUDI ARABIA

Eng. Arafat Matar

Arafat Matar is Branch Manager for Current in Saudi Arabia. He has nearly nine years of experience in construction and holds a B.Sc. in Architectural Engineering from Cairo University.

At Current he has worked on the EMC2, EMC5, EMC7 and EMC8 factories, Factory 3 for Milita Egypt and the administrative headquarters in Beit Al Watan.

From 2018 to 2022 he worked at a leading construction company on the New Capital Central Bus Terminal, the R1 District, Resort 5 in Al Galala and the Elite factories. His responsibilities included owner invoicing, tender documents, authority coordination, site inspections, cost and schedule control, design review, progress reporting, supplier negotiations and quality assurance.

He holds the IPMA Individual Competence Baseline certification. He is fluent in Arabic and proficient in English.

Industrial, commercial, infrastructure

STRENGTHS
Site execution, planning, contracts

CONSTRUCTION DIRECTOR

Eng. Mohamed Shelbaya

Mohamed Shelbaya is Current's Construction Director. He leads the delivery of industrial and commercial projects, and combines site execution with technical office work, planning and contract administration.

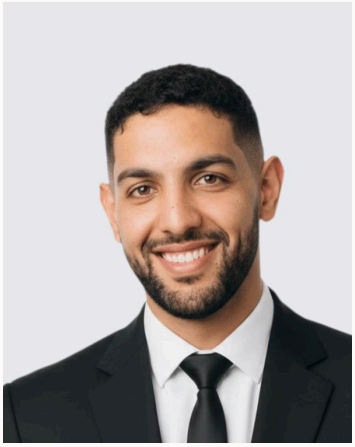

He runs projects from design coordination and procurement through cost control, site supervision, QA/QC and HSE compliance to final handover.

His work includes managing stakeholders and subcontractors, value engineering, and turning technical drawings into buildable solutions that protect the budget and the schedule. He has delivered factories, warehouses, administrative buildings and infrastructure packages.

On site he builds teams that communicate clearly, decide quickly and spot risks early.

- RFIs and submittals
- Shop drawings
- BOQs
- Progress reporting
- Claims support
- Value engineering
- Subcontractor management

ROLE
Administrative Director

PREVIOUSLY
Procter & Gamble
Supply Chain and Procurement Manager

FOCUS
Administration, procurement, governance

ADMINISTRATIVE DIRECTOR

Eng. Omar Elewa

Omar Elewa is Current's Administrative Director. He oversees administration, procurement and operations governance.

Before joining Current he was Supply Chain and Procurement Manager at Procter & Gamble, where he improved operating procedures, negotiated contracts and built a network of qualified vendors. His experience covers strategic planning, sourcing, logistics and inventory control, carried out to HSE standards.

At Current he uses dashboards and data to keep the organisation accountable and to support decisions. He also manages relationships with clients and suppliers.

Earlier experience in the sports and marketing sectors rounds out his background.

EXPERTISE

- Strategic planning
- Sourcing
- Contract negotiation
- Logistics
- Inventory control
- Vendor qualification
- Reporting dashboards
